● **Submit your assignment**

1. Supervised learning deals with unlabeled data, while unsupervised learning deals   **1 / 1 point**
Resume assignment with labelled data.

   ○ True

● **Receive grade**
   ⦿ False

To Pass   66% or higher

   ✓ **Correct**

Your grade   Correct! Unsupervised learning deals with unlabeled data, and supervised
100%   learning deals with labelled data

2. The "Regression" technique in Machine Learning is a group of algorithms that are   **1 / 1 point**
We keep your highest score
used for:

   ○ Finding items/events that often co-occur; for example grocery items that are usually bought together by a customer.

👍 **Like** 👎 **Dislike** ▭ **Report an issue**
   ○ Prediction of class/category of a case; for example, a cell is benign or malignant, or a customer will churn or not.

   ⦿ Predicting a continuous value; for example predicting the price of a house based on its characteristics.

   ✓ **Correct**
      Correct! Regression techniques are used for continuous variable prediction, whereas classification techniques handle dependent variables with discrete classes.
